Quick Coupling Assembly
A-STYLE 10" & 12"

Quick Coupling Components

1. Locking Ring
2. Ball/ Male Fitting
3. Socket/ Female Fitting
4. Sealing O Ring

The Wil-loc A-Style Ball and Socket Coupling is a quick action coupling consisting of four components:

Quick Coupling Assembly Procedure

Step 1:
Insert the ball into the socket so that the ball seats loosely against the O ring inside the socket.

Step 2:
Reach around the locking ring with the "short" locking jaw and seat its' gripping edge securely into the grooved lip on the back side of the locking ring.

Step 3:
While keeping tension on the "short" locking jaw so that it remains in place, extend the "long" locking jaw forward to reach behind the locking ring and seat the gripping edge securely into the grooved lip.

Step 4:
Finally, ensure that the leading edge of the ball is aligned just enough so that it does not cut into the O ring surface, then (with 12" fittings) insert the leverage bar into the hole provided on the base of the "long" jaw and pull back toward the barbed shank to lock the ball into the socket.

NOTE: 10" A-Style Wil-loc female/socket fittings have lever locking handles permanently attached to the "long" jaw mechanism. Locking action is similar to the B-Style lever arm.
